

CSA0502 – QUERY PROCESSING FOR DATASCIENCE

Name: Syed Khasim Ameen **Reg No:** 192324215

QUESTION 17

AIM

To calculate mean, minimum and maximum age for each school.

QUESTION

Write a Pandas program to split the following dataframe by school code and get mean, min, and max value of age for each school.

CODE

```
import pandas as pd
df = pd.read_csv("school.csv")
print(df.groupby("school_code")["age"].agg(["mean", "min", "max"]))
```

OUTPUT

```
mean min max
school_code
SCH01 14.5 14 15
SCH02 14.5 13 16
SCH03 14.5 14 15
```

RESULT

The program executed successfully and produced the required result.
